Wireless Configuration Instructions (Mac OSX)

These instructions will configure your wireless connection to the **TMU** wireless network. It will allow you to authenticate and browse using a higher level of security and protection.

Quick Access
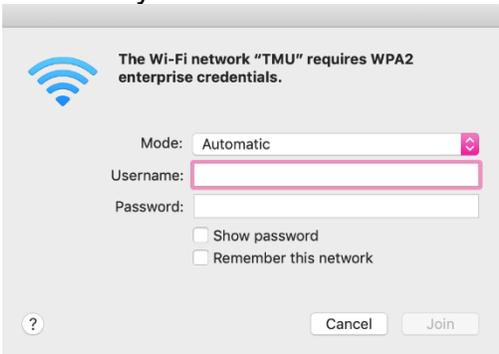

[Configure Wireless Connection](#)
[Disable Cached Credentials](#)

Configure Wireless Connection

1. Click on AirPort to see a list of available networks. Click **TMU** network to connect.

2. When prompted for credentials, please enter your torontomu username and password - please note that your student number is not a valid username on the wireless. Click **OK.**

3. From the **Verify Certificate** window, ensure that the certificate is for the TMU network and that it is authenticating to cprad.ns.ryerson.ca. Click **Continue**.
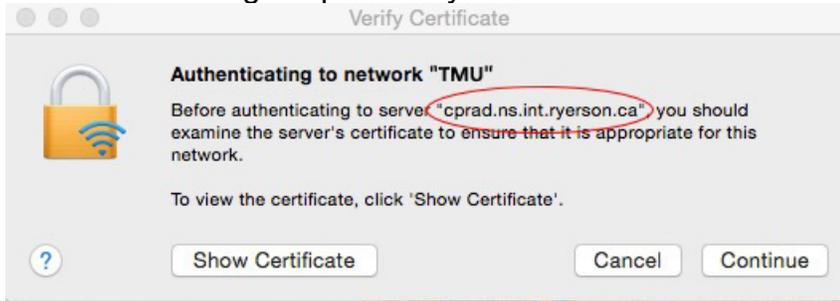

4. If you are prompted to enter your administrative password, enter it and click **OK**, to apply the certificate.

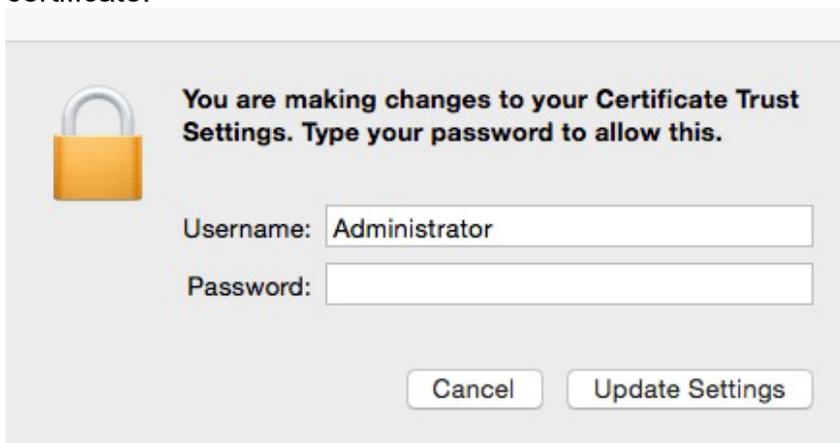

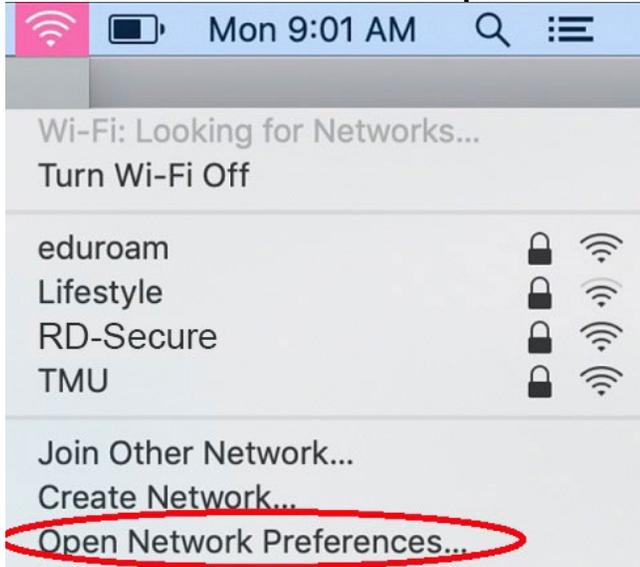

You will now be connected to the **TMU** wireless network. Your credentials are now cached and you will automatically be authenticated when you are within range of the wireless signal.

NOTE: For security reasons, we recommend that you **do NOT cache your credentials**. This is especially important for laptops that will have multiple users.
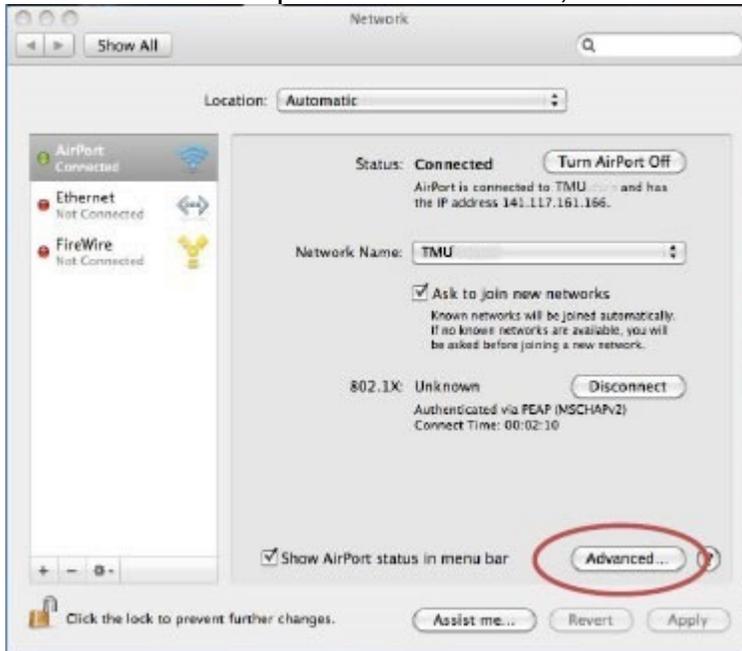

Please follow the remaining steps to disable this feature.

3. From the **Advanced Network** window, click the **802.1x** tab. For **Users Profiles,** click **TMU**.

4. Selecting **TMU** displays your username and password on the right side of the screen. Make sure the **Always prompt for password** box is checked.
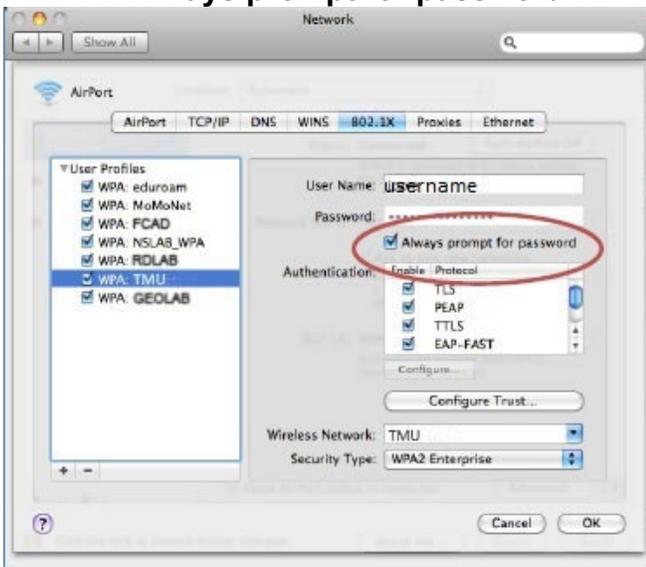

You will be connected to the wireless network and your credentials are no longer cached. You will be prompted each time you wish to log onto the wireless network.
