NEIGHBOURHOOD CHANGE RESEARCH PARTNERSHIP

Trends | Processes | Consequences | Policy Interventions

www.NeighbourhoodChange.ca

Halifax | Montréal | Toronto | Hamilton | Winnipeg | Calgary | Vancouver

Two key national income trends — the growing gap between the rich and the poor and the progressively smaller middle-income group — have major social implications at the neighbourhood level that we are only beginning to identify, understand, and explain.

Toronto

Census Metropolitan Area

Summary of 25 year
neighbourhood change
trends

Socio-Spatial Trends, 1991 – 2016

INCOME INEQUALITY + 56%

INCOME POLARIZATION + 47%

SEGREGATION + 14% VISIBLE MINORITY
+ 21% BLACK

Spatial Polarization and Segregation

1990's 'Divided Cities' literature

A new socio-spatial order
with stronger (more rigid)
divisions, and
greater inequality

Peter Marcuse & Ronald van Kempen, 2000

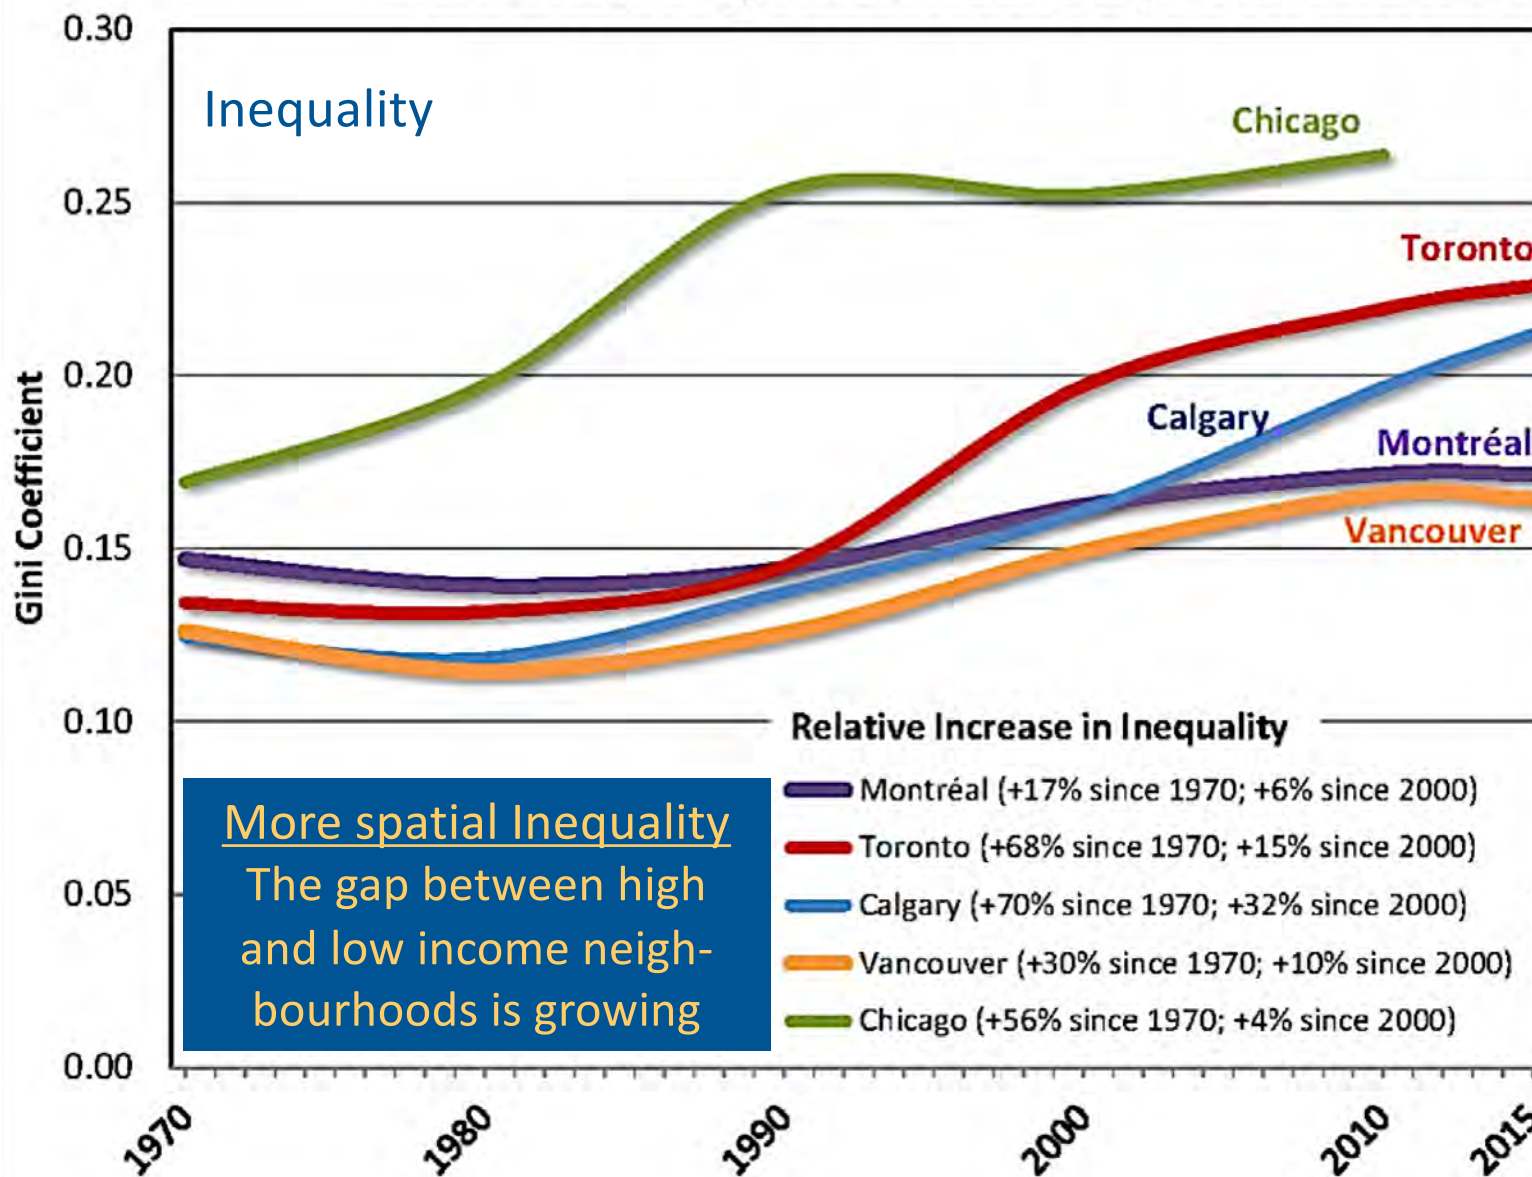

Canadian Socio-spatial Trends, 1970-2015

INCOME INEQUALITY & INCOME POLARIZATION

Income Inequality Between Census Tracts

Five Metropolitan Areas, 1970–2015

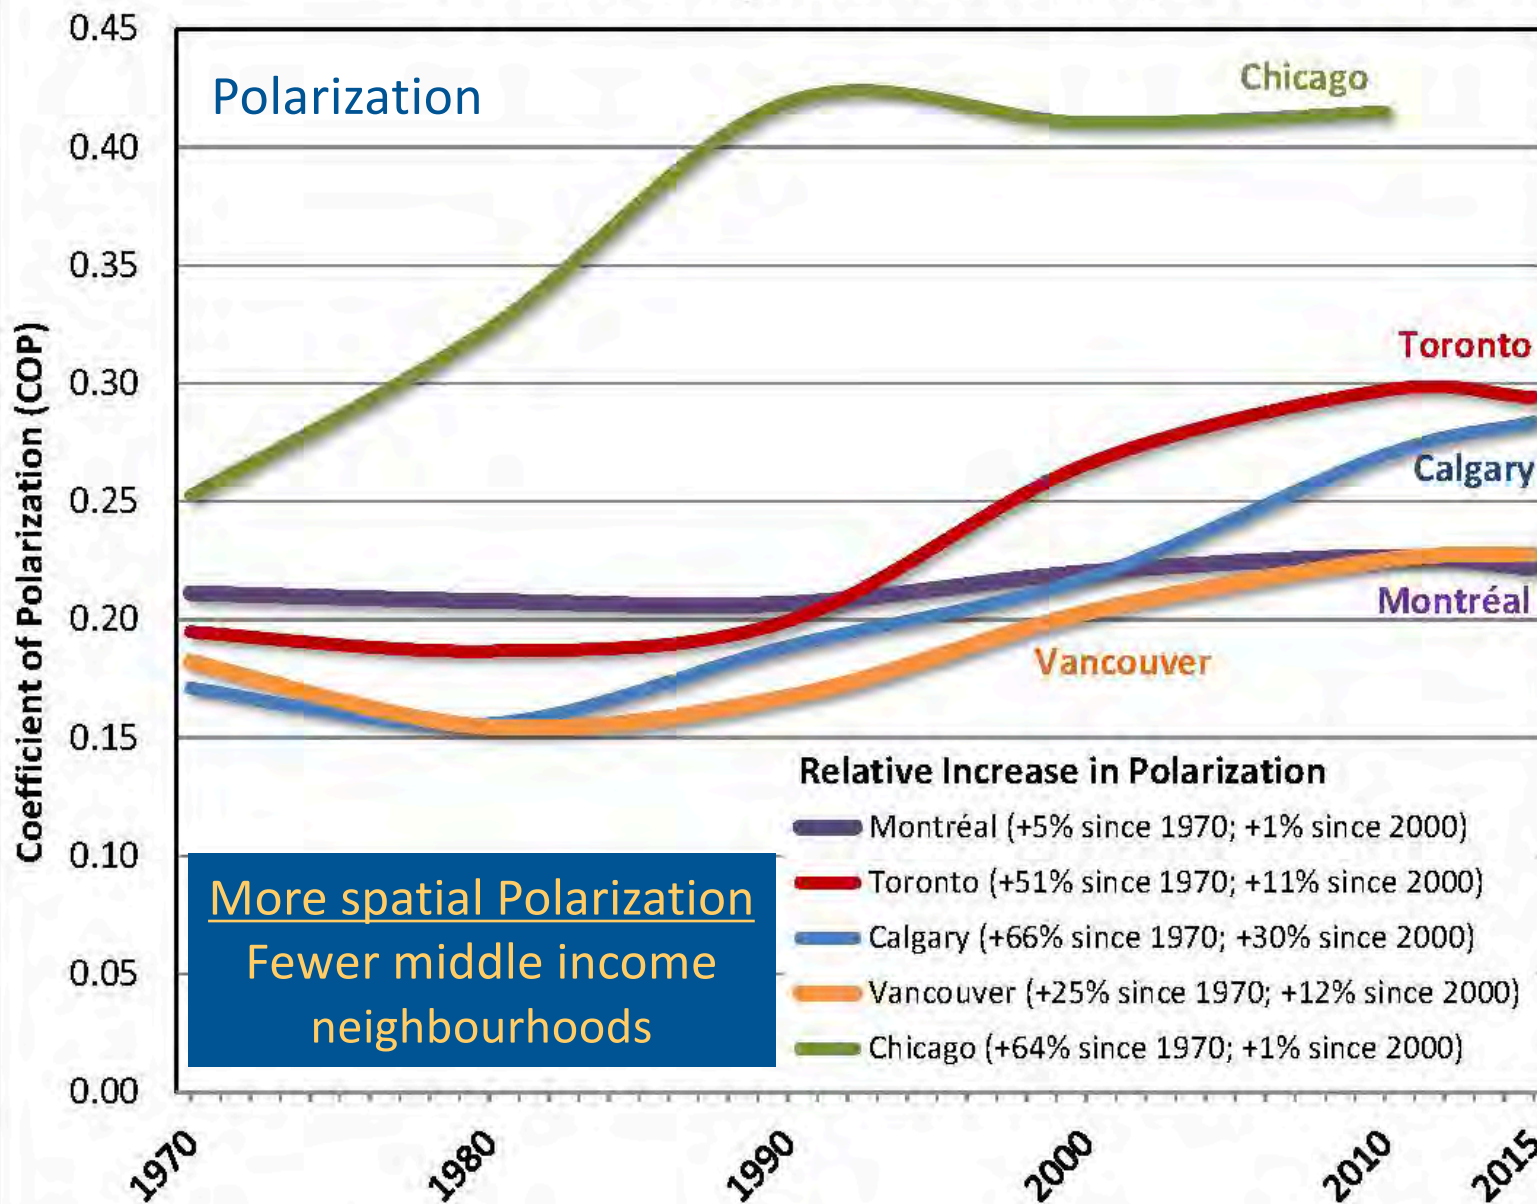

A Gini coefficient value of 0.0 represents perfect equality. All census tracts would have the exact same proportion of income relative to their share of the population. A Gini coefficient value of 1.0 represents perfect inequality. All of the income would be taken by one single census tract while others take none.

Notes: Calculated from census tract average individual income from all sources, before-tax. Canadian income 1970–2000 and 2015 is from the Census. Income for 2010 is Canada Revenue Agency T1FF taxfiler data.

Chicago income from United States Census 1970-2000 and American Community Survey 2010.

Income Polarization Between Census Tracts

Five Metropolitan Areas, 1970–2015

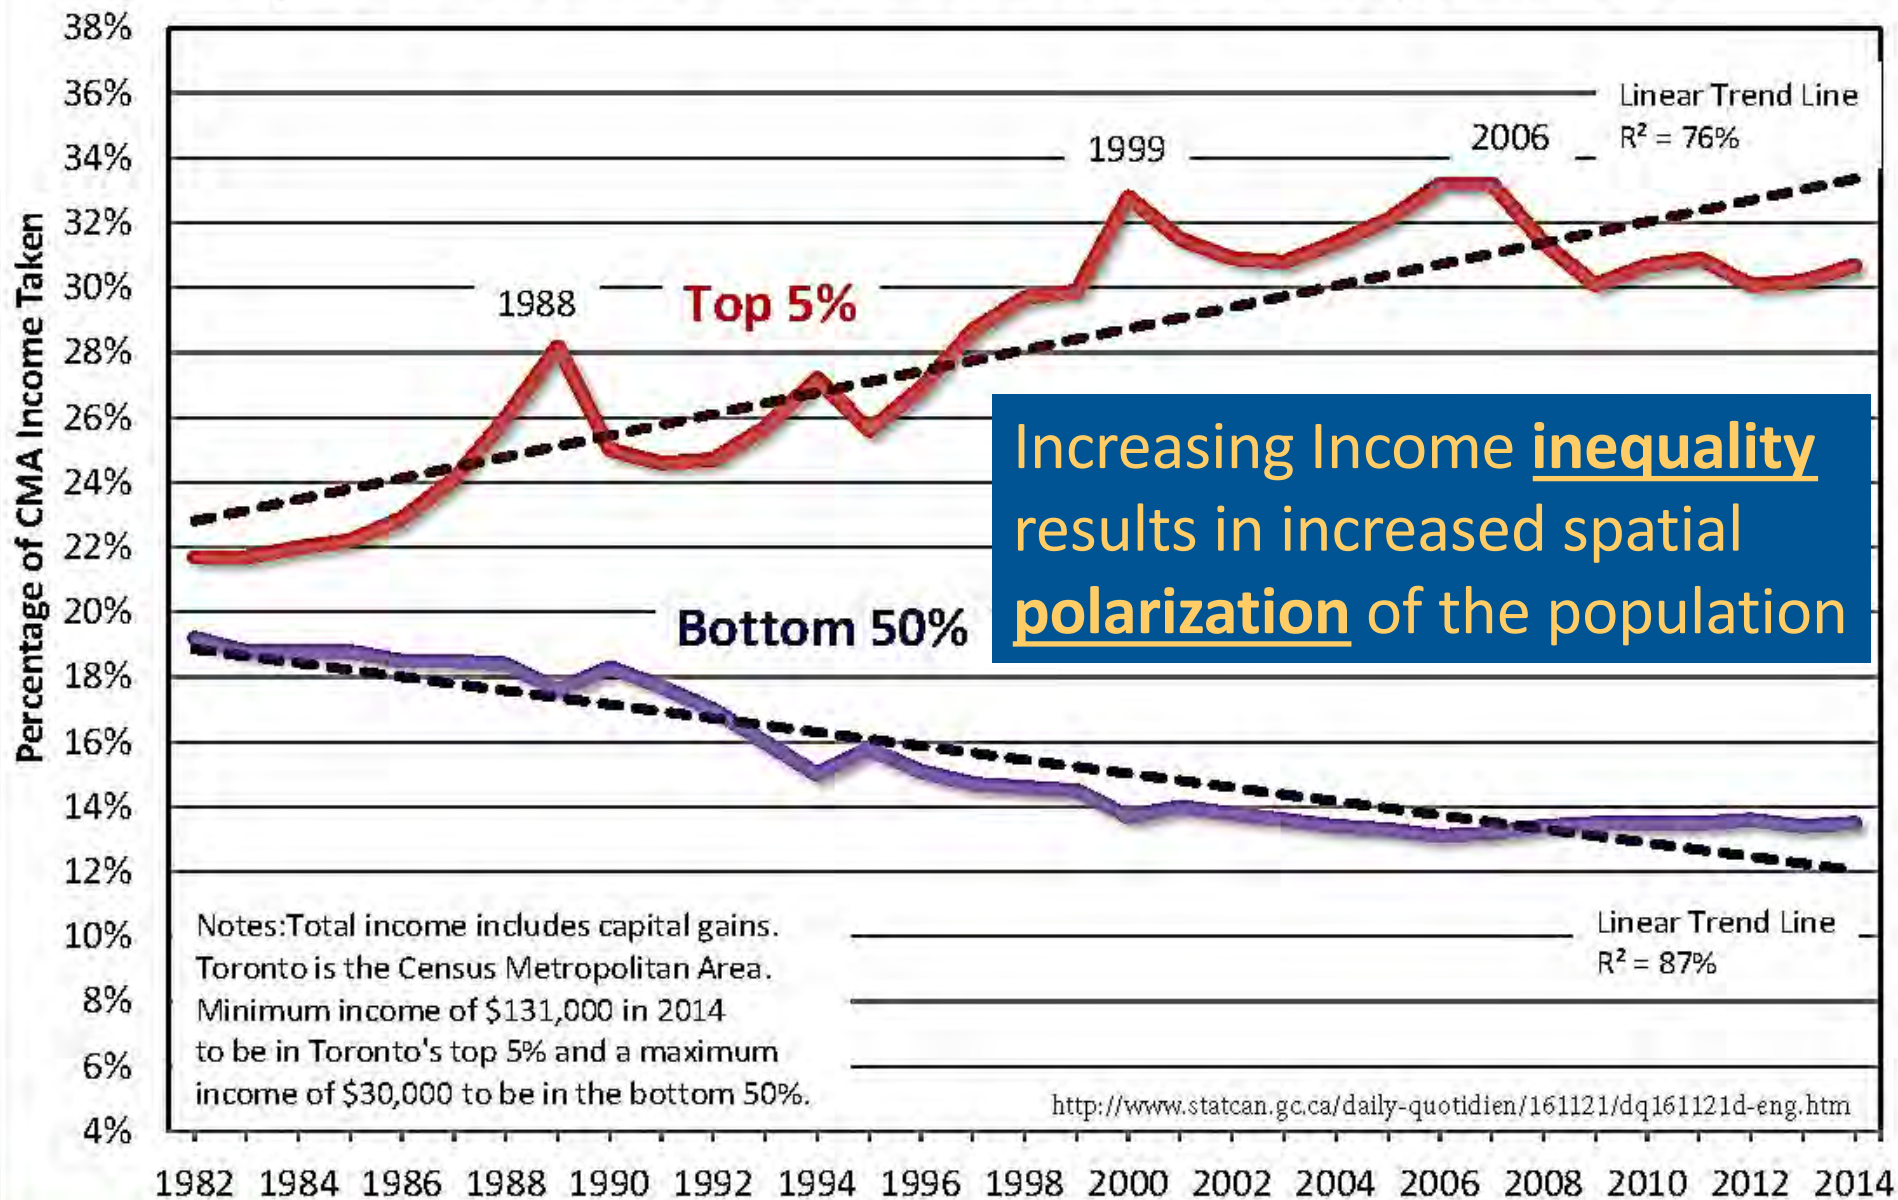

A coefficient value of 0.0 represents the complete absence of polarization. All census tracts would be middle income, each having the exact same average. As census tracts move away from each other, towards higher or lower incomes, the COP value increases with no maximum.

Notes: Calculated from census tract average individual income from all sources, before-tax. Canadian income 1970–2000 and 2015 is from the Census. Income for 2010 is Canada Revenue Agency T1FF taxfiler data.

Chicago income from United States Census 1970-2000 and American Community Survey 2010

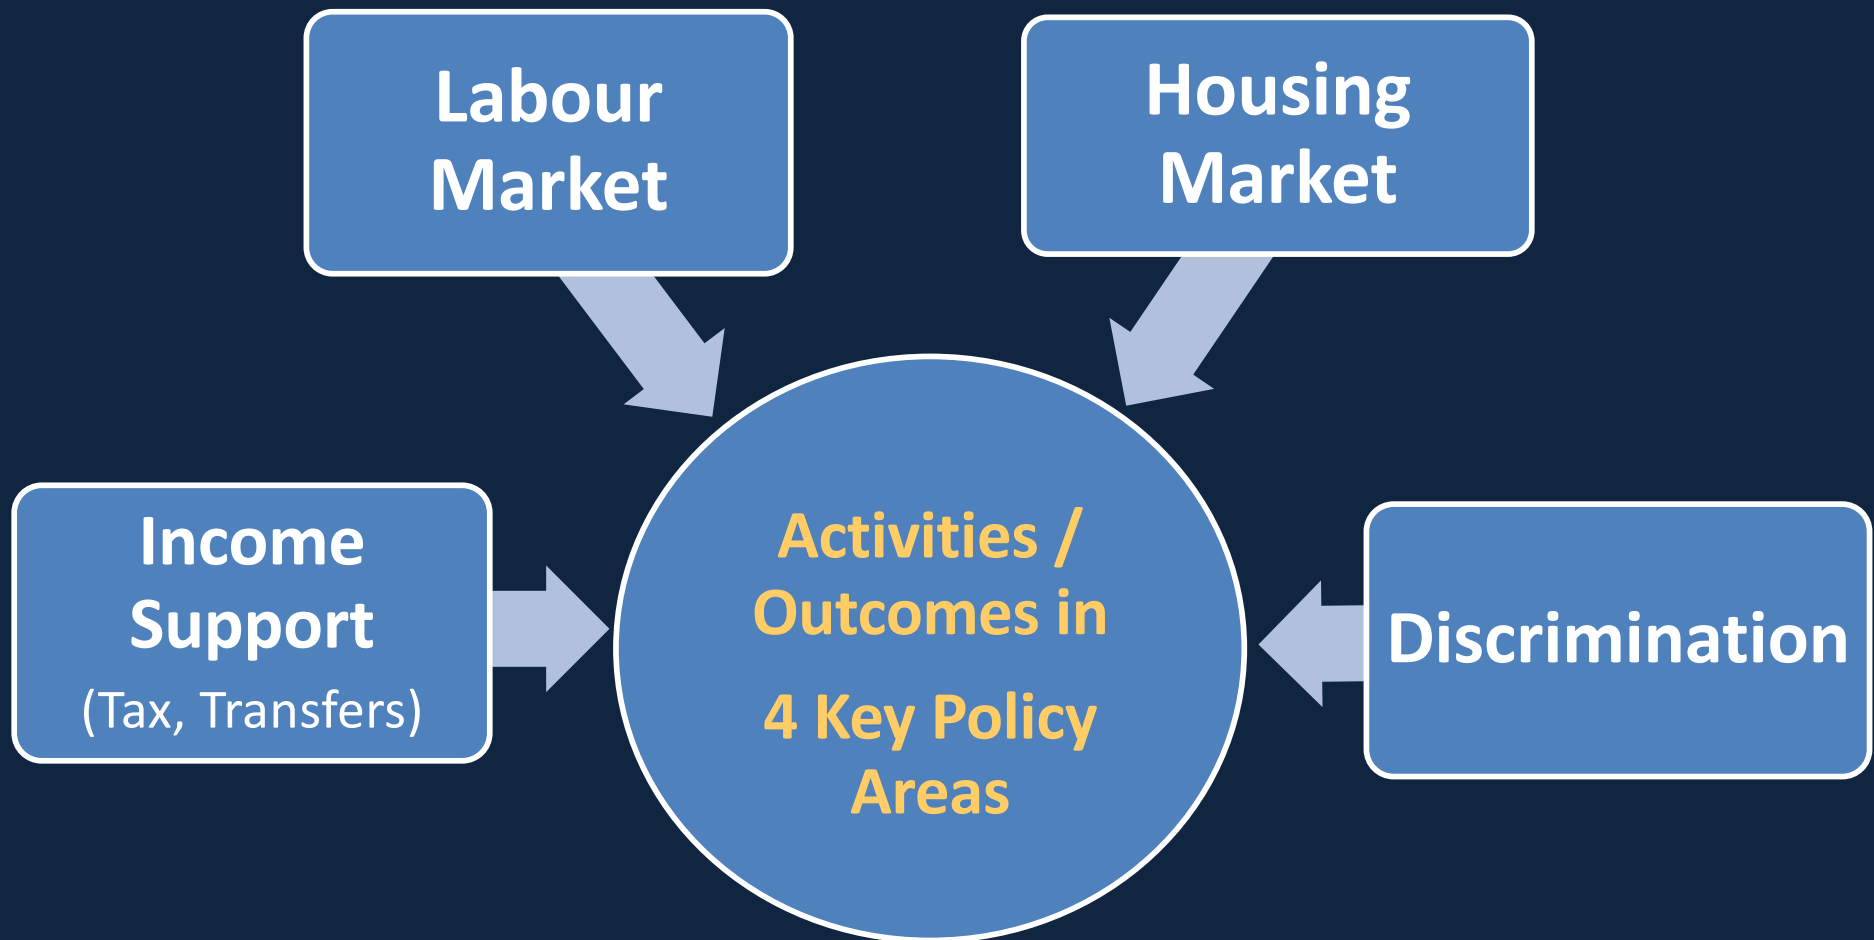

Share of Toronto CMA's Annual Income Taken by Top 5% & Bottom 50% of Toronto's Taxfilers, 1982–2014

Increasing Income inequality results in increased spatial polarization of the population

Cause: Specific Processes

Government / Governance

Two Examples:
Working Poor & Unemployment Rate

LABOUR MARKET DISCRIMINATION

Who are the “working Poor”?

With the assistance of Statistics Canada and other researchers the Metcalf Foundation developed a definition of the working poor as someone who:

- has an after-tax income below the Low-income measure (LIM),
- has earnings of at least \$3,000 a year,
- is between the ages of 18 and 64,
- is not a student, and
- lives independently.

With data from the 2016 Census, the Toronto region analysis is currently being updated by John Stapleton with the assistance of the Metcalf Foundation and the Neighbourhood Change Research Partnership.

Definition

SEGREGATION

Segregation

1. to differentiate, distinguish, or isolate
2. the spatial separation of specific social groups from the wider population within urban space

“a social group is considered ‘segregated’ if **the spatial distribution** of its members ... **differs significantly** from that of the larger population; the greater the difference in spatial distributions the higher the degree or **level of segregation.**”

Bourne & Walks 2011:534.

Voluntary Segregation?

Talk about segregation often implies motivation, the intent by some, a dominant societal group, to isolate and control an “other” within society.

Many quickly raise the retort that we mainly have “voluntary” ethnic enclaves and “ethnoburbs.”

Yes, we do have ethnic enclaves.

But, we also have involuntary segregation.

Ethnic Enclaves: 'Voluntary' Concentration

“immigrant enclaves, in which newcomers to cities use local neighborhood community resources as stepping stones toward assimilation and potentially geographic dispersal.”

(e.g., ethnic communities, ethnoburbs)

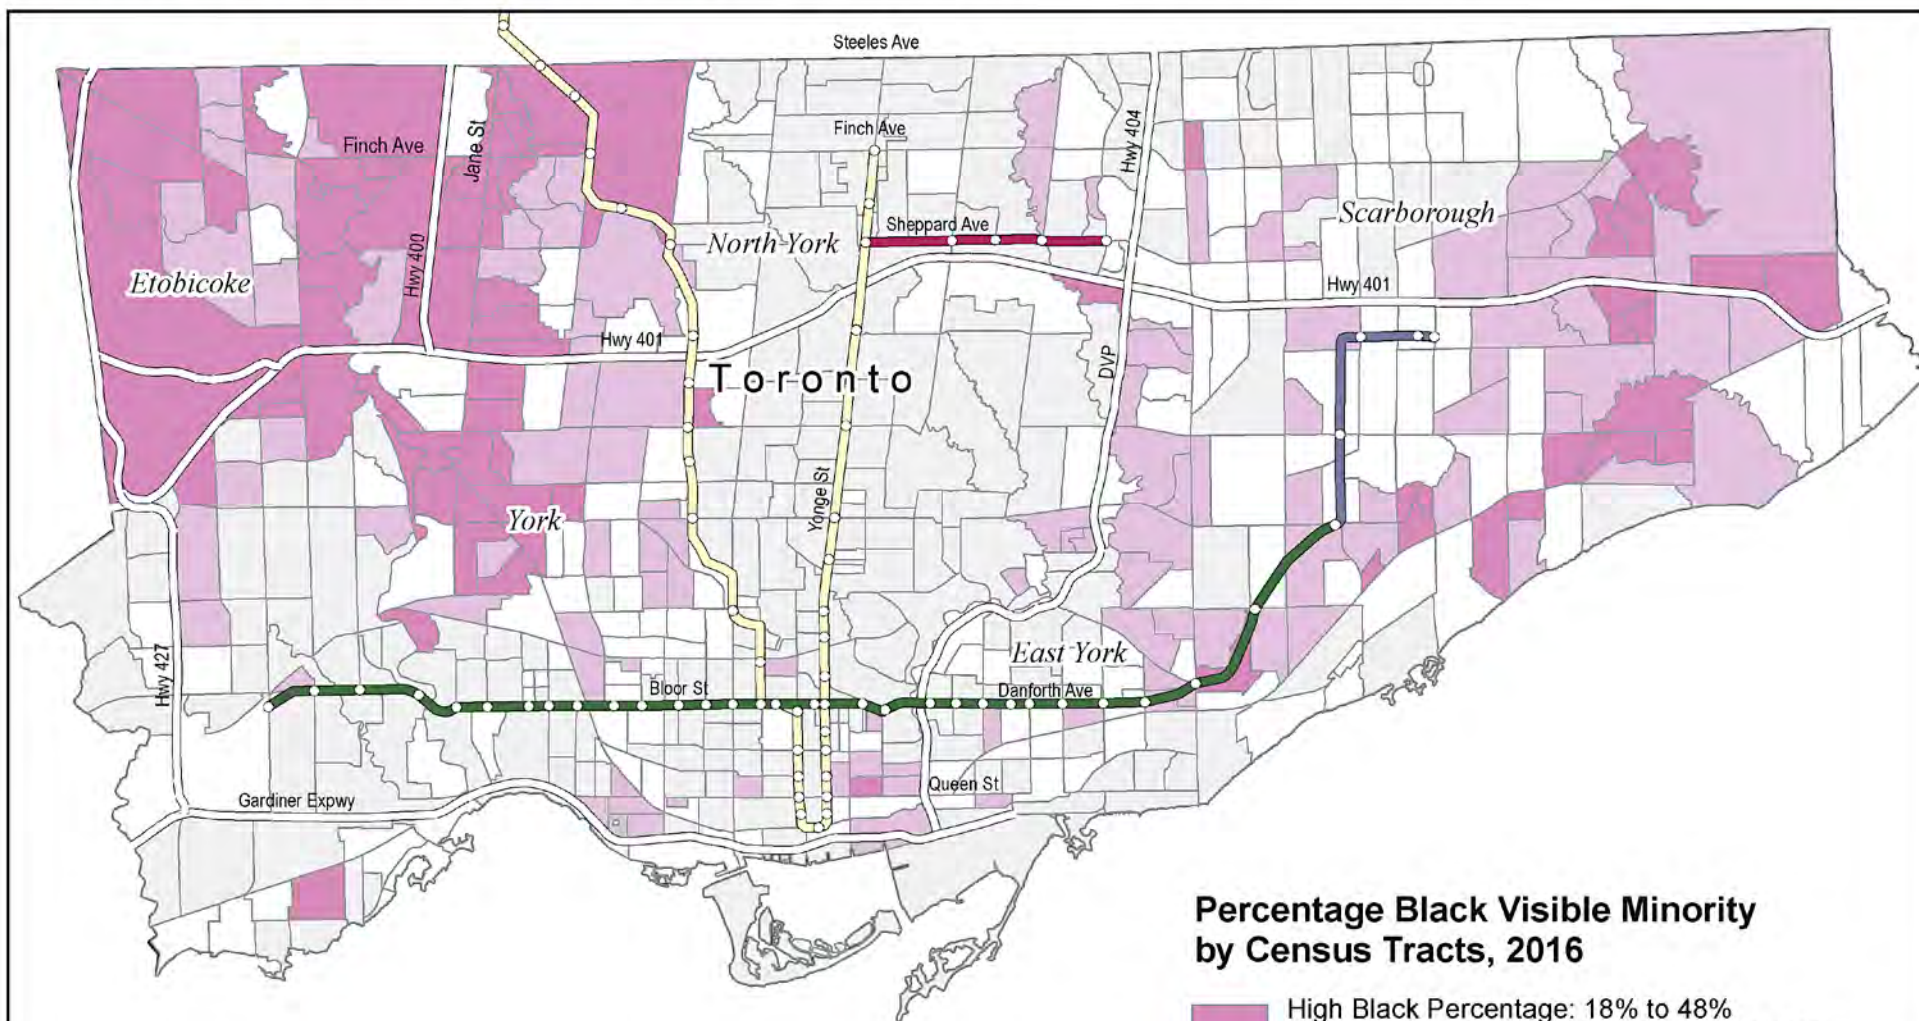

Bourne & Walks 2011:535.

Arab & West Asian	0.633	0.501	0.488	-23%

Coefficients are indices of dissimilarity, calculated in relation to the distribution of whites (non-visible minorities) based on census tract populations. Figures for 1991 and 2001 from Walks and Bourne, Table 3 (2006). Figures for 2016 calculated by Richard Maaranen, Neighbourhood Change Research Partnership, University of Toronto, September 2018.

Source: Statistics Canada, Census Tract Profile Series, 1991-2016

'Racial' (skin colour) Segregation

Toronto CMA 1991 to 2016

'Racial' segregation

(non-Whites / Whites, index of dissimilarity)

+14% (from 39.5 in 1991 to 45.2 in 2016)

The visible minority and White populations
in the Toronto CMA are increasingly not
living side-by-side within and between census tracts.

Note: The Index of Dissimilarity considers number of visible minority vs White people within and between census tracts in relation to the distribution for the whole CMA. The Gini and COP only considers incomes between CTs (but not within CTs), comparing CT averages against each other in the CMA as a whole.

Black Segregation: Toronto / Chicago

Index of dissimilarity

- **51.2** Toronto CMA in 2016, **42.3** in 1991
- **75.9** Chicago Metro in 2010, **84.6** in 1990

Greater Toronto Region: Socially Unequal and Segregated

- “On several metrics, including those related to income, greater Toronto is among Canada’s richest, but also most socially unequal and segregated, metropolitan areas.
- “The region has grown more unequal over the last 45 years.
- “Trends toward socio-spatial concentration and polarization are worrisome, with an increasing overlap between processes of racialization, wage and occupational polarization, and neighbourhood-based income segregation.”

~ Alan Walks, “Inequality and Neighbourhood Change in the Greater Toronto Region,” forthcoming, UBC Press.

Neighbourhood Income Change Trajectories: Class, Race, Immigration Status

- “...trajectories of neighbourhood income change depend more on the class, race, and immigration status of inhabitants.
- “Residents of neighbourhoods gaining ground are more likely to have a university degree, be employed in managerial or administrative jobs, and less likely to be foreign-born or a visible minority.
- “Neighbourhoods marked by long-term income decline, meanwhile, are significantly more likely to house visible minorities, particularly South Asians and African-Canadians, and more than twice the proportion of immigrants as neighbourhoods that are gaining ground.”

~ Alan Walks, “Inequality and Neighbourhood Change in the Greater Toronto Region,” forthcoming, UBC Press.

Explaining the Trends; Policy Options

PROCESSES & THE FUTURE

Toronto: Summary

1. Income inequality, income polarization, and SES/ethno-cultural/racial segregation are increasing
2. Increased dramatically since the late-1980s, especially during the 1990s, at a slower pace since
3. There is no sign of a reversal
4. We have the strongest possible evidence; evidence that is being ignored by governments
5. We know the cause: public policy; labour market and housing market dynamics; discrimination

Macro Level Processes

Global / National Forces

- Globalization
- Neoliberalism
- Financialization
- Economic Inequality & Polarization

What about specific regional and local processes / forces / factors?

Solution? Year-by-year reverse the negative trends

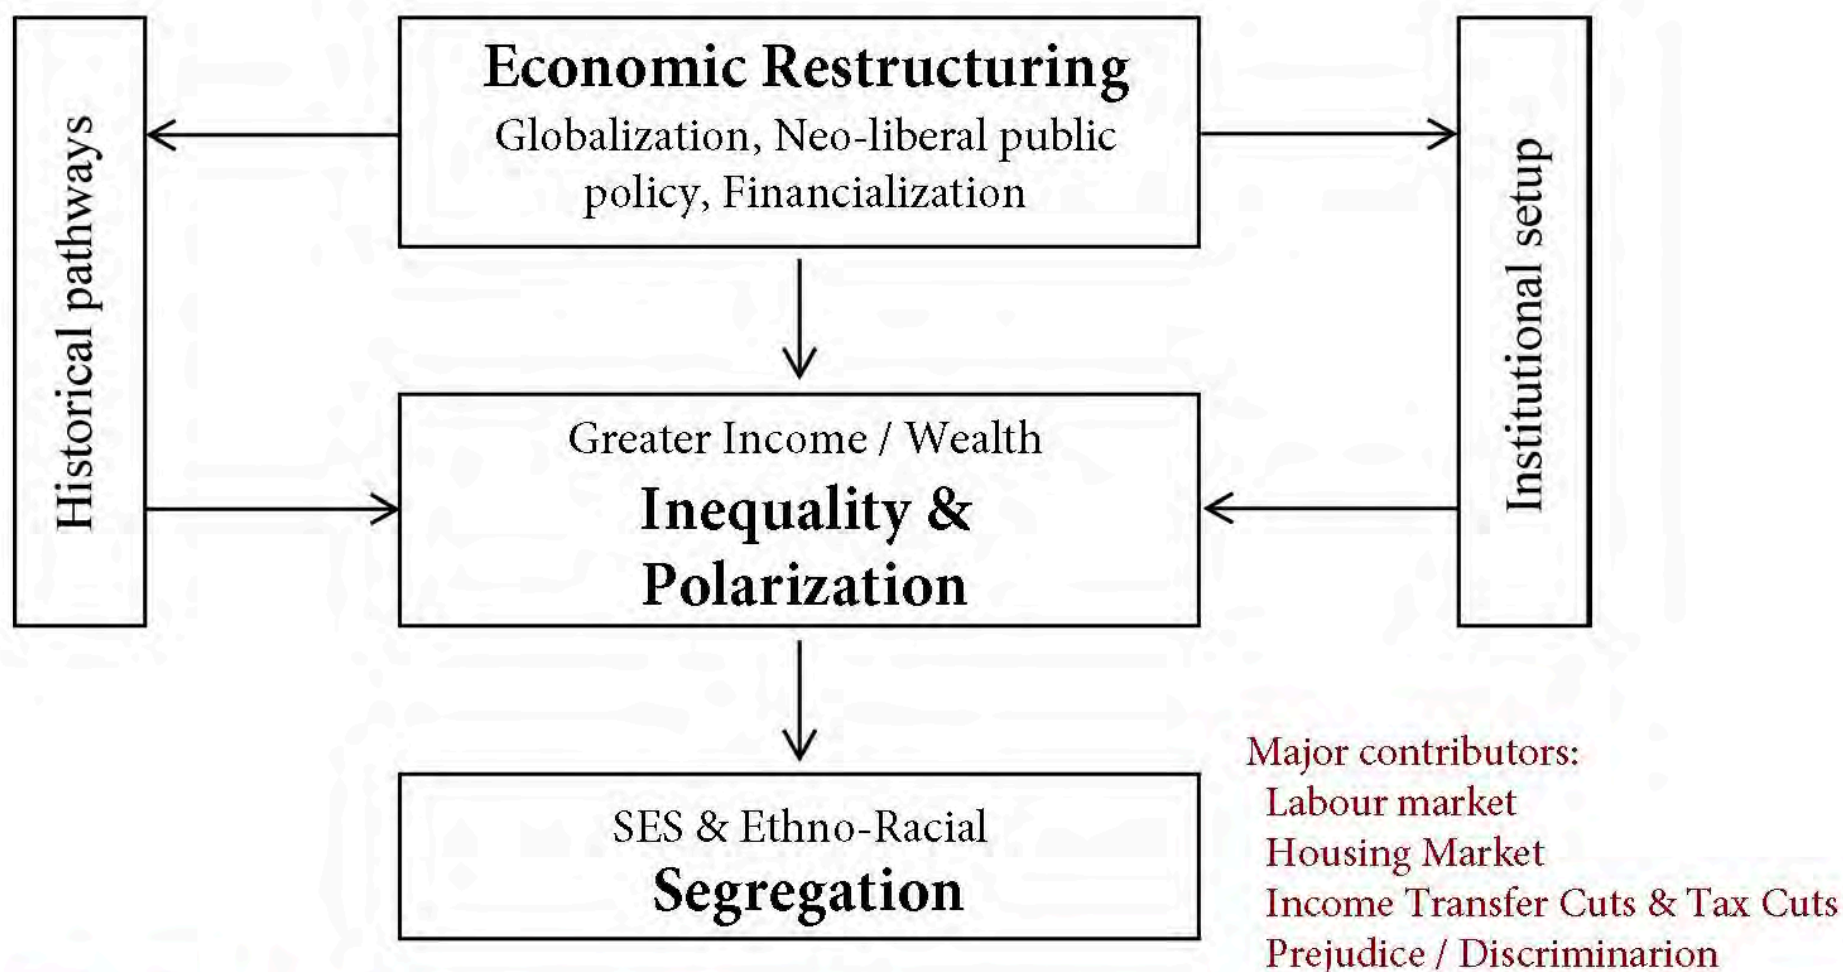

GOVERNMENT: Fair, inclusive policies

LABOUR MARKET: Wages, Regulations

HOUSING SYSTEM: Cost of Housing

TAXES & TRANSFERS: Fair Distribution

DISCRIMINATION: Effective Protections

The Macro Context for Socio-economic Segregation

Adopted from: Tammaru, Musterd, van Ham (2016) A multi-factor approach to understanding socio-economic segregation

Jan 28, 2019 / Ingrid Gould Ellen

4 Ways to Tackle Segregated Cities, and Why It Matters

1. policymakers can invest in efforts to enforce existing anti-discrimination laws to root out the discrimination that persists in the housing market.
2. Inclusionary zoning policies and incentives to encourage density around transit hubs can be effective tools.
3. localities might prioritize creating and preserving affordable housing in gentrifying areas.

Racial segregation in the United States leaves children of different races and ethnicities separated into neighborhoods with widely unequal resources and opportunities. In order to achieve racial equity, we must grapple with segregation and the unequal opportunities it has created.

<https://www.livingcities.org/blog/1279-4-ways-to-tackle-segregated-cities-and-why-it-matters>

The future of global inequality: How should it be tackled?

Tackling global income and wealth inequality requires important shifts in

- National and global tax policies
- Educational policies
- Corporate governance
- Wage-setting policies
- Data transparency

We project income and wealth inequality up to 2050 under different scenarios. In a future in which “business as usual” continues, global inequality will further increase. Alternatively, if in the coming decades all countries follow the moderate inequality trajectory of Europe over the past decades, global income inequality can be reduced—in which case there can also be substantial progress in eradicating global poverty.

How can inequality be tackled?

- 1. Progressive Taxation.** “Tax progressivity is a proven tool to combat rising income and wealth inequality.”
- 2. Ownership Transparency.** “A global financial register recording the ownership of financial assets would deal severe blows to tax evasion, money laundering, and rising inequality.”
- 3. Address Education and Employment Exclusion.** “More equal access to education and well-paying jobs is key to addressing the stagnating or sluggish income growth rates of the poorest half of the population.”
- 4. Public Investment (education, health, environment).** “Governments need to invest in the future to address current income and wealth inequality levels, and to prevent further increases in them.”

Why worry about more rigid socio-spatial divisions and greater inequality?

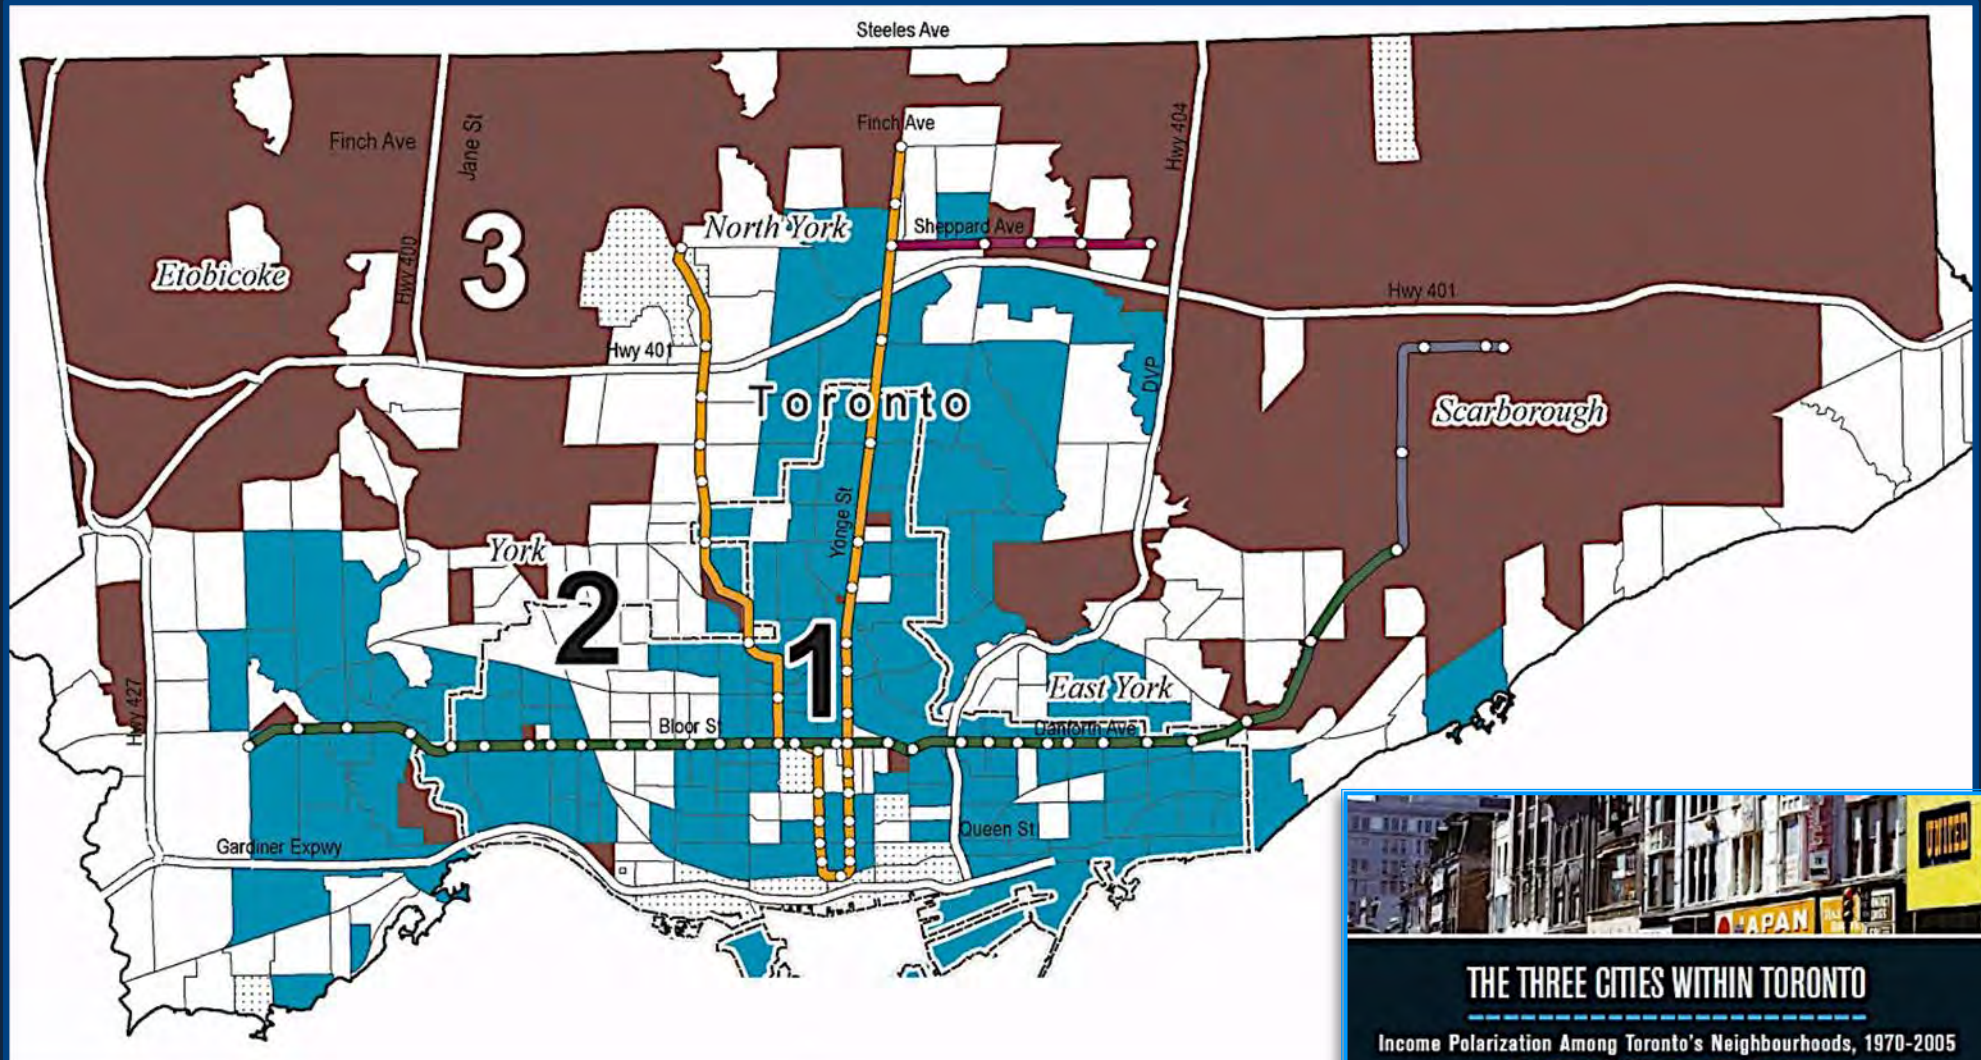

“Inequality promotes strategies that are more self-interested, less affiliative, often highly antisocial, more stressful, and likely to give rise to higher levels of violence, poorer community relations, and worse health.”

– Richard Wilkinson, *The Impact of Inequality*, 2005:22

Research Required: Power

- The analysis of power in and over cities
- How power is exercised by the drivers that possess power
- How the impacts of the exercise of power over cities can be better guided, and
- What the goals should be

Former Toronto	33,650	5.2%	38,565	4.9%	4,915	-0.3%	15%
Etobicoke	29,915	9.2%	40,515	11.2%	10,600	2.0%	35%
North York	48,505	8.3%	63,120	9.5%	14,615	1.2%	30%
Scarborough	55,195	10.0%	67,225	10.8%	12,030	0.8%	22%
City of Toronto	192,400	8.1%	239,850	8.9%	47,450	0.8%	25%
High Income CTs	6,720	1.8%	15,935	2.8%	9,215	1.0%	137%
Middle Income CTs	45,620	5.3%	40,840	5.4%	-4,780	0.1%	-10%
Low Income CTs	139,625	12.4%	183,020	13.4%	43,395	1.0%	31%

Source: Statistics Canada, Census Profile Series 1996 and 2016.

Income status based on census tract average individual income from all sources, before-tax of Black and non-Black residents. Low income CTs have average income less than 80.0% of the CMA average income; middle income CTs 80.0% to 119.9%; high income CTs 120.0% and higher. Figures for former cities of Toronto 2016 based on census tract totals. Population sum of CTs is a little less than City of Toronto due to random rounding and census income suppression rules. 11/2018

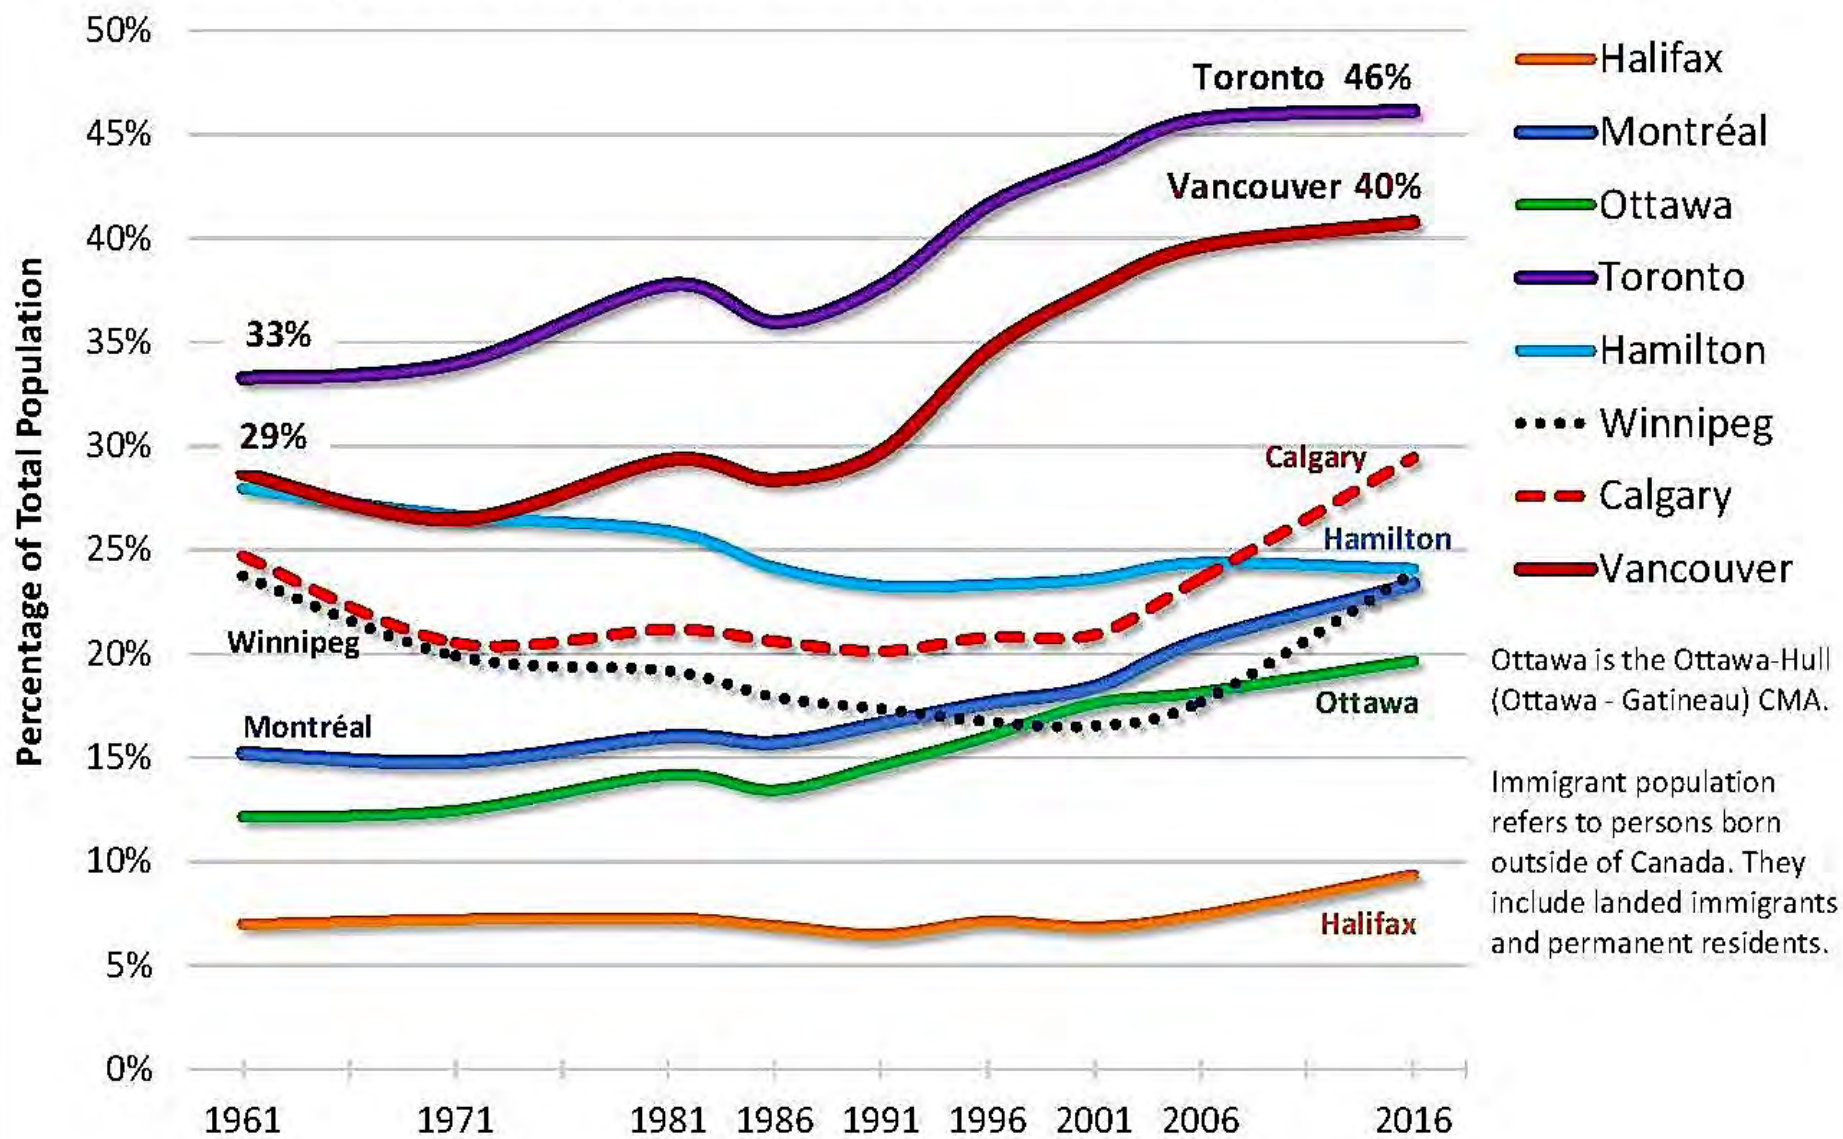

Black Population, 2016

Ten Census Metropolitan Areas in Canada

□ Number of Black People ● Percentage of the Total Population

Immigrant Population Share Eight Metropolitan Areas in Canada, 1961–2016

Immigrant Status of the Population, 2016

Canada and Eight Census Metropolitan Areas

□ Non-immigrants □ Recent immigrants (2006-2016 arrivals) □ Established immigrants (pre-2006 arrivals)

0% 10% 20% 30% 40% 50% 60% 70% 80% 90% 100%

Immigrant refers to landed immigrants and permanent residents. Non-immigrant refers to persons born in Canada and non-permanent residents.

Index of Dissimilarity

Index of Dissimilarity

The standard measure of segregation is the Index of Dissimilarity (D), which captures the degree to which two groups are evenly spread among census tracts in a given city. Evenness is defined with respect to the racial composition of the city as a whole. With values ranging from 0 to 100, D gives the percentage of one group who would have to move to achieve an even residential pattern - one where every tract replicates the group composition of the city. A value of 60 or above is considered very high. For example, a D score of 60 for black-white segregation means that 60% of either group must move to a different tract for the two groups to become equally distributed. Values of 30 to 60 are usually considered moderate levels of segregation, while values of 30 or less are considered low.

Demographers typically interpret change either up or down in the following way:

- Change of 10 points and above in one decade - Very significant change
- Change of 5-10 points in one decade - Moderate change
- Below 5 points in one decade - Small change or no real change at all

Change can be cumulative, and small changes in a single decade – if they are repeated over several decades – can constitute a significant trend. Therefore we pay attention not only to what has happened since 2000 but also to the longer term trajectory for each group.

Logan, J. R., & Stults, B. (2011). *The persistence of segregation in the metropolis: New findings from the 2010 census*. Census brief prepared for Project US2010, 24.

Polarization

Is not the same as inequality; it is

- the disappearing middle,
- fewer middle-income jobs,
- the growth (absolute or relative) at both the top & bottom ends of the income distribution.

Polarization is both a fact and a process.

Process: Redistributive forces/factors causing a movement towards the poles of the distribution.
