

Graduate Diploma [GDip (Type 3)]**Professional Master's Diploma in Aerospace Design Management**

The Professional Master's Diploma in Aerospace Design Management will deliver pertinent, practical, timely and effective education in the areas of Aerospace Design Engineering. This domain is widely recognized as having significant and growing societal importance with respect to aircraft certification and maintenance. The diploma intends on fulfilling the professional development gap in the field by deploying diploma graduates into the aerospace industry who will find that their new knowledge and perspective can facilitate communication between senior management and the Engineers that implement manufacturing practices that meet rapidly evolving certification compliance. The program will provide knowledge of certification practices from audits by regulatory agencies as well as documentation requirements for agile manufacturing regulatory compliance and investigation procedures when issues arise. Graduates will be given additional knowledge of design and certification in addition to their own field of expertise, which will make them more valuable and flexible professionals.
