

Graduate Diploma [GDip (Type 3)]

Professional Master's Diploma in Enterprise Information Security, Privacy and Data Protection

The Professional Master's Diploma in Enterprise Information Security, Privacy and Data Protection provides participants with the knowledge and skills required to function competently as enterprise information security, privacy and data protection officers, administrators, technicians and analysts. The diploma is designed for professionals within organizations who are responsible for security, privacy and protection of enterprise information against daily attacks, threats, and system breaches, on the one hand, and inadvertent or malicious disclosure on the other. With a broad, encompassing understanding of the underlying technologies, technical risks and limitations, as well as the legal, social and compliance environments, graduates will find that their new knowledge and perspective can facilitate communication between senior management and IT staff, provide new opportunities for leadership and championship within their organizations and enable them to articulate budgetary, training and staff needs in security, privacy and data protection in a professional and highly articulate fashion.
