

CLINICAL TEACHING DO'S AND DON'TS

for preceptors and teaching practices

PLANNING THE PLACEMENT

Do:

- Provide appropriate clinical opportunities and supervision
- Plan to orient students to call model, preceptor coverage and planning time off
- Establish systems of communication for preceptors sharing the same student
- Create a practice protocol on student preceptor communication, problem solving and conflict resolution
- Make a plan about arrival at births so the student doesn't arrive first

Don't:

- Offer to take students if you don't have time for teaching
- Book your caseload dependant on student labour
- Deny appropriate clinical opportunities
- Assign more than the MEP caseload
- Set expectations different than the course level
- Tell students to ignore or violate MEP policies

LEARNING ENVIRONMENT

Do:

- Welcome students and orient to practice and hospital
- Model reflective practice
- Acknowledge error and model how to follow up error
- Remove students from situations where clients or colleagues may be treating them inappropriately
- Have a formal application and interview process for New Registrant (NR) jobs after midterm in the Clerkship

Don't:

- Exclude students from practice events and peer reviews
- Use the promise of a job to pressure students
- Gossip about others in the practice with students
- Expect students to continue care if they are exposed to Human Rights violations
- Offer NR positions to students prior to midterm in the Clerkship

Content based on feedback from preceptors, students, and faculty.

CLINICAL TEACHING DO'S AND DON'TS

for preceptors and teaching practices

TEACHING STRATEGIES

Do:

- Be an active teacher
- Invite clients to 'teach'
- Offer practice sessions
- Assess student readiness prior to performing skills on clients

Don't:

- Expect performance rather than a learning process
- Push students to do a skill at an inappropriate level
- Put students in the position of being without appropriate supervision

FEEDBACK

Do:

- Invite feedback
- Give feedback on the go
- Have regular planned feedback sessions
- Give both positive and constructive feedback
- Give concrete examples of how specific skills/competencies can be improved

Don't:

- Expect students to know what they do well
- Expect students to know that they don't do well
- Yell or swear at students
- Use physical contact except in an emergency
- Blame students for clinical error

EVALUATION

Do:

- Use the GTLA* and course evaluation form
- Acknowledge different 'right' ways of doing some skills/procedures
- Meet with the student prior to the midterm and final meeting with the tutor

Don't:

- Compare your current student to a previous student
- Forget to acknowledge that ongoing clinical evaluation is stressful for students
